

CMC and TST Accomplish California's First Fuel Cell Project at a Heavy Industrial Facility

The project host site, CMC-member **TST/TIMCO**, welcomed over 100 guests, local and statewide elected officials, SCAQMD officials, and media to the ribbon cutting event at their secondary aluminum smelting plant in Fontana on October 11, 2006. **TST's CEO Andrew Stein** worked closely with **California Metals Coalition (CMC) Executive Director James Simonelli** for over 3 years on this project and was the linchpin for making this fuel cell and microturbine project a reality.

Andrew Stein (r) accepts California's Senate Certificate of Recognition from Senator Nell Soto

James Simonelli (r) accepts California's Senate Certificate of Recognition from Senator Nell Soto

Fontana state Senator Nell Soto (D-Fontana) presented certificates of recognition on behalf of **California's Senate** to both TST/TIMCO and the California Metals Coalition for this groundbreaking project. This is an honor rarely bestowed and was deeply appreciated.

Both Senate Certificates read:

**State of California
SENATE
Certificate of Recognition**

In recognition of the ribbon-cutting ceremony for California's first 500 kilowatt on-site fuel cell project here in the city of Fontana, I commend your efforts to use near-zero emission fuel cells to power manufacturing operations.

Congratulations and best wishes!

Nell Soto, Senator, 32nd District
